

# Project Report #8

Beksultan Yerzhanov 200103513

Darkhan Tashim 200103208

First of all, we added filter  
last week but it doesn't  
work

### Looking for...

Search

Price by:  
Choose order ▼

All

Cup

Hoodie

Cap

T-Shirt

Panama

Shopper

Skirt

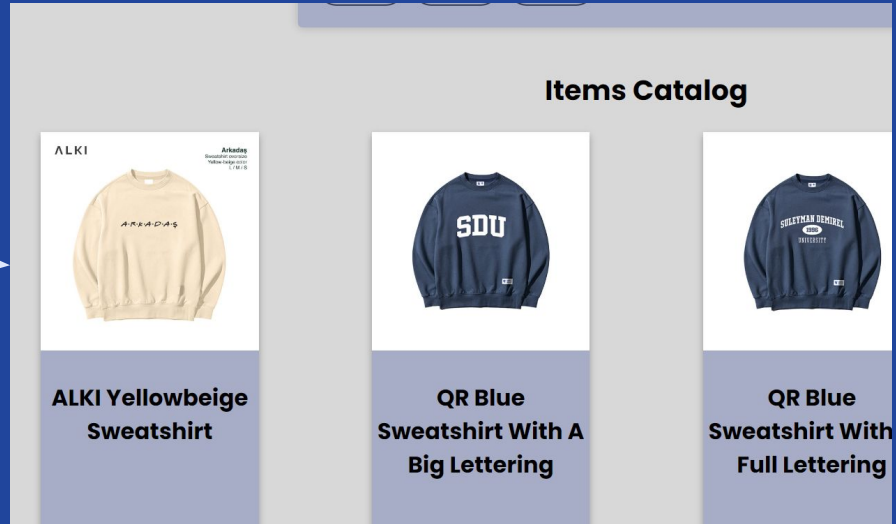

Sweatshirt

### Items Catalog

# But now it's working!

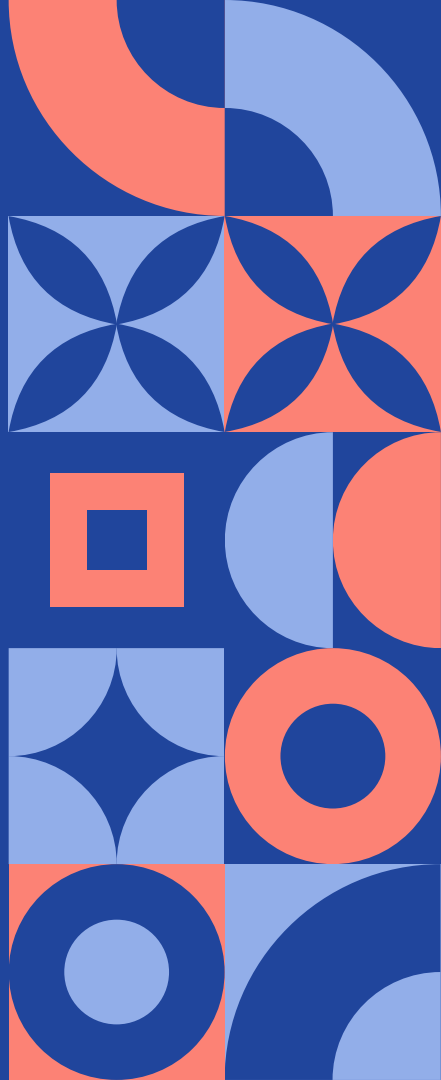

*On button pressed*

Named every button as category, so we can track it in Go file

```
<div id="buttons">
  <button class="button-value" value="All"
name="category">All</button>
  <button class="button-value" value='Cup'
name="category">
    Cupm
  </button>
  <button class="button-value" value='Hoodie'
name="category" >
    Hoodie
  </button >
  <button class="button-value" value='Cap'
name="category">
    Cap
  </button>
  <button class="button-value" value='T-Shirt'
name="category">
    T-Shirt
  ...
</div>
```

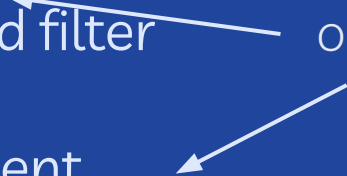

```
if r.Method == "POST" {
    priceBy := r.FormValue("priceby")
    category := r.FormValue("category")
    if category != "" {
        if category == "All" {
            query := "SELECT * FROM items"
            if priceBy == "asc" {
                query += " ORDER BY
item_price ASC"
            } else if priceBy == "desc" {
                query += " ORDER BY
item_price DESC"
            }
            fmt.Println("Query" + query + "
Priceby:" + priceBy)
            rows, err := db.Query(query)
```

In catalogHandler if method is POST(**submit button is pressed in form**) we get value from priceby and category and if category isn't empty, means that button is pressed and it will sort items by that category in query. Also, if priceby isn't empty it will sort by price respectively.

# Plans for next week:

- Add rating system and add filter by rating.
  - Add opportunity to comment items
  - Fix minor bugs
- One of em
- 
- The text 'One of em' is positioned to the right of the list. Two white arrows originate from it: one points to the word 'filter' in the first item, and the other points to the word 'comment' in the second item.
